

Superior Graphite will be attending 2015 AUSA Annual Meeting & Exposition on October 12-14, 2015 in Washington, D.C.

**Come visit us at AUSA Expo!**

The AUSA Annual Meeting & Exposition held every October is the largest land power exposition and professional development forum in North America. Besides the extensive exposition, this event consists of workshops, informative presentations, panel discussions on pertinent military and national security subjects and important business meetings. The AUSA Annual Meeting gathers over 26,000 attendees from around the world, over 600 displays and nine international pavilions, as well as a new AUSA Homeland Security Pavilion this year.

**Superior Graphite Will Be Featuring the Following Products:**

**Protect Tiles Ceramic Armor:**

Our pressureless-sintered, economical Silicon Carbide tiles provide lighter weight and increased ballistic performance over metals and alumina ceramics designed for advanced armor systems. ProtectTiles provide superior multi-hit and multi-threat protection. They offer an alternative to other non-oxide ceramics, and they are available in a variety of geometries and thicknesses to meet your program and threat requirements. Moreover, our manufacturing method allows 30-40% decrease in pricing than other materials on the market, and only 3 weeks or less in production while maintaining equal or better performance than our competitors.

**SINTER-PUR**

**Sinter-Pur Advanced Ceramic Powders:**

These highly sinterable non-oxide ceramic powders include Alpha and Beta Silicon Carbide, as well as Boron Carbide powders. We manufacture virgin powders and ready-to-press formulations. If custom sizes, blends or shapes are needed, we can accommodate your specifications. Sinter-Pur products possess superior strength and durability, plus we offer extensive in-house analytics lab services.

Delivering unparalleled quality since 1917, Superior Graphite specializes in thermal purification, and advanced sizing, blending and coating technologies, providing graphite and carbon-based solutions to a wide range of markets including: agriculture, battery, fuel cells, ceramics, carbon parts, ferrous and nonferrous metallurgy, friction, hot metal forming, composites, powder metals, lubricity, and drilling additives.
