

**Superior Graphite Will Be Exhibiting at CFSMA 2016 International Friction & Sealing Material Exhibition and Colloquium  
on May 12-13, 2016 in Nanjing, China**

18<sup>th</sup> CFSMA 2016 Expo & Colloquium  
May 12-13, 2016  
Nanjing International Exhibition Center  
Nanjing, Jiangsu province  
China

**Come visit us at Booth W06 !**

China Friction and Sealing Material Association (CFSMA ) will be holding the 18<sup>th</sup> CFSMA International Friction & Sealing Material Technology and Product Exhibition this year. This international exhibition is the only one supported by the Ministry of Science of China in friction, auto part and sealing industries and thus provides a unique access to Chinese market.

The CFSMA Exhibition serves as a platform for the release and commercialization of new products, technologies, equipment and materials. It also aims to promote import and export, exploration of new markets, investment and cooperation between China and other countries.

***Superior Graphite Is Pleased to Feature the Following Products:***

**Resilient Graphitic Carbon product line:**

RGCs are used as friction modifiers in brake linings to control and adjust the compressibility of the pads, regardless of the working temperature. RGCs also strongly contribute to noise reduction and reduce vibration development.

**Formula FX™ Graphite and Coke:**

Designed to meet the rigorous requirements of the Friction Industry, FormulaFX™ is available in a variety of grades, from synthetic to crystalline flake graphite to calcined petroleum coke, each with distinct performance characteristics to satisfy specific industry applications.

**For more information or to reserve a meeting, please contact:**

Superior Graphite has been invited to present a paper during the technical session:

***“Resilient Graphitic Carbon, Role and Influence in Today and Future Brake Pad Performance especially Cu Free Pads”***

**Presented by:** Dr. Eric Salmon, Global Product Manager Friction Products  
Grant Chen, Technical Sales Manager China
