

Superior Graphite will be exhibiting at **GIFA 2015 Trade Fair**
on June 16-20, 2015 in Dusseldorf, Germany

GIFA 2015 Foundry Trade Fair
June 16-20, 2015
Dusseldorf Fairgrounds
Hall 13
Dusseldorf, Germany

Come visit Superior Graphite at Booth A61, Hall 13!

GIFA is the most important trade fair for foundry technology in the world. Hosted every four years, GIFA 2015 will be the meeting ground for the world's leading foundry manufacturers, engineers and suppliers to showcase innovative and technological advances in the metal castings practice. The show attracts over 77,000 attendees from 80 nations exploring the offerings from more than 1,700 exhibitors from over 50 countries.

Superior Graphite Is Pleased to Feature the Following Products:

Desulco is the famous premier recarburiser for Cast Iron and Steel. Produced with Superior Graphite's patented high temperature furnace technology, Desulco has a highly pure graphitic crystalline structure with low gas content, making it a unique carbon perfect for the metal casting industry.

DesulcoMC is an ultra pure melt cover for non-ferrous applications. Ensuring a clean working environment, DesulcoMC reduces oxidation of alloying elements protecting the melt cover from oxygen contamination.

Ark Electrodes are small diameter high power graphite electrodes designed for primary melting, ladle metallurgy, and specialty furnace applications worldwide. Produced by continuous in-line graphitization furnaces, the electrodes possess consistent uniform properties resulting in lower consumption and enhanced performance required by our customers.

SuperCarb is a Graphitic inoculant designed for Grey Iron and CGI. SuperCarb is a fully non-FeSi based material offering a new approach for inoculation practices. The material is available in different sizes for applications in ladle, wire or post inoculation treatment.
