

FOR IMMEDIATE RELEASE:

**Superior Graphite Will Be Exhibiting at CastExpo and the Metalcasting Congress on April 16-19, 2016, in Minneapolis, Minnesota, Booth # 2216**

**Chicago, IL (March 30, 2016)** — Superior Graphite, a graphite and carbon solutions company, will be exhibiting at the CastExpo on April 16-19, 2016, at the Minneapolis Convention Center in Minneapolis, MN. CastExpo is the largest metalcasting trade show and exposition in Americas and is sponsored exclusively by the American Foundry Society (AFS). This show offers casting buyers, metalcasters, designers and suppliers to connect and educate themselves on the latest and the greatest metalcasting has to offer. Moreover, CastExpo offers educational sessions on how to improve operations, quality and efficiency in metalcasting industry.

Superior Graphite will be featuring Desulco® at Booth # 2216. Since its introduction in 1977, Desulco® has been recognized worldwide as the premier recarburiser for use in the production of ductile iron. Desulco® is produced with Superior Graphite's patented high temperature furnace technology. This continuous process purifies the raw material, selected low sulfur petroleum coke, at temperatures in excess of 2760°C, resulting in the final product, Desulco®. Due to its extremely high purity, its particle morphology, and its graphitic crystalline structure, Desulco® is a unique type of carbon. The extremely low gas content of Desulco® makes it the preferred material for use as a late addition in the grey iron industry as well as in steel plants producing high carbon steel grades.

**About Superior Graphite**

Delivering unparalleled quality since 1917, Superior Graphite specializes in thermal purification, and advanced sizing, blending and coating technologies, providing graphite and carbon-based solutions to a wide range of markets including: agriculture, battery, fuel cells, ceramics, carbon parts, ferrous and nonferrous metallurgy, friction, hot metal forming, composites, powder metals, lubricity, and drilling additives.
