

FOR IMMEDIATE RELEASE:

Superior Graphite Will Be Exhibiting at Ceramics Expo 2016 on April 26-28 in Cleveland, Ohio at Booth # 419

Chicago, IL (March 30, 2016)— Superior Graphite, a graphite and carbon solutions company, will be exhibiting at the Ceramics Expo on April 26-28, 2016, at the International Exposition Center in Cleveland, Ohio. Ceramics Expo was created as a dedicated marketplace for all raw materials, machinery, equipment, and technology used within the ceramic manufacturing supply chain. The exhibition draws in decision-makers within ceramic manufacturers, and from a wide range of industries utilizing ceramic materials and components, such as automotive, aerospace, transportation, electronics, military, environmental and medical technology.

Superior Graphite will be showcasing Sinter-Pur®, its recently rebranded and redesigned advanced ceramic powders product line. Sinter-Pur® non-oxide ceramic powders include internally synthesized beta silicon carbide, ultra-fine, high purity green alpha silicon carbide and high purity, ultra-fine milled boron carbide powders. Superior Graphite offers silicon carbide powders in both virgin (no sintering aid added) and ready-to-press formulations (containing a sintering aid) according to customers' specifications. In house milling and sizing capabilities allows for the ability to create custom sizes, chemical formulations and blends.

The Sinter-Pur® product line brings to market a balance of product performance, consistency and value to the advanced ceramics market. These powders are specified in applications such as automotive mechanical seals, lapping and polishing tables, toner additives (cleaning agent), particulate filter production and ceramic armor products. A focus on providing high quality performance, to meet an ever changing global market has Sinter-Pur® the product of choice in new applications such as solar panel and aerospace markets. These products are produced in the USA and are available internationally through select agents and distributors in the EU, Japan and Asia.

About Superior Graphite

Delivering unparalleled quality since 1917, Superior Graphite specializes in thermal purification, ultra-fine milling, specialty blending and coating capabilities to provide graphite and carbon-based solutions to a wide range of markets including: agriculture, battery, fuel cells, ceramics, carbon parts, ferrous and nonferrous metallurgy, friction, hot metal forming, composites, powder metals, lubricity, and drilling additives.
